

ITS MOBILITY

Cluster for intelligent mobility

Who we are

Germany's largest network for intelligent mobility

ITS mobility is the cluster for intelligent mobility in Germany. We are a non-profit association with more than 200 members. These include large industrial partners, research institutions, small and medium-sized enterprises (SME), associations and municipalities, networks and experts mainly from Germany. Our headquarters are located at the research airport in Brunswick.

We focus on the mobility of the future and innovative technologies that will make traffic safer and more efficient. Our goal is to connect business and science in this field and to bring experts together. To this end, we initiate and support specialist events and projects on key topics of intelligent mobility.

We benefit both from our more than 20 years of experience and from the combined expertise in our network.

Our topics

Automated and connected driving

Digital technologies will be an integral part of mobility in the future.

Networking vehicles with each other and with infrastructure can help to make traffic safer and more efficient.

Sustainable mobility concepts

Alternative drive systems, innovative mobility concepts and new material concepts in car manufacturing are key factors on the way to a modern, sustainable and resource-saving mobility system.

Transformation of the automotive industry

In order to achieve climate protection targets and meet the changing mobility needs, future drives are electrified, transport is digitalised and vehicles are connected with each other, the infrastructure and other data sources.

Our services

Innovation

Do you have an idea for an innovation project? ITS mobility helps to select suitable consortium partners from industry, research, associations and municipalities, and to check financing options and apply for funding, and takes over the administrative coordination of the project.

Offices

We provide administrative support as an office for industry consortia and project networks. In this role, we are the central point of contact and take care of membership and budget management, internal information management, and assist in the organisation of (online) meetings and specialist workshops, among others.

Events

Whether it's a specialist conference, workshop or seminar, on-site or digital, ITS mobility is there to help with all questions relating to the organisation of events. We approach qualified speakers, take care of ticketing and participant management using professional tools and we create websites and advertising material.

Network

ITS mobility connects its members with each other, with network partners and multipliers. We bundle their expertise in projects, events and joint booths at national and international trade fairs and congresses. We introduce pupils and students to the topic of intelligent mobility in special projects.

How to become a member

Advantages as a member

- comprehensive information on current research results, events, calls for tender and funding programs on mobility-related topics
- contact with cooperation and project partners
- support in the application and implementation of collaborative research projects
- participation in trade fairs, symposia, specialist events and workshops at attractive conditions – regionally, nationally and internationally
- presentation of members, their core competences and activities in the ITS mobility eNewsletter, on our website, social media and other advertising media
- access to the international ITS community, policymakers, administration and multipliers
