Outline

New, digital technologies should make the railways more efficient and reliable. The use of these systems in safety-critical applications also requires new procedures for their verification and validation which ensure the high safety requirements of the railway sector. The symposium Test4Rail has been bringing together representatives from industry, research and operations since 2013 to present and discuss requirements and solutions.

On-site vs. On-line

The symposium is planned on-site at the German Aerospace Center in Berlin Adlershof, in the hope, that the situation in autumn will allow for a face-to-face meeting. Should COVID-19 not allow for a face-to-face meeting we will realise an on-line event. We will monitor the situation and will inform all participants as soon as the format of the upcoming symposium is fixed.

Hosted by:

Prof. Dr.-Ing. Katharina Seifert
DLR, Institute of Transportation Systems

Deutsches Zentrum
für Luft- und Raumfahrt
German Aerospace Center

Florian Rehr
ITS mobility
